

Inventory Control

Attaché PRO's Inventory Control module provides you with a complete stock management system. It even includes facilities to account for non-reducing items and services such as labour, freight and insurance. Stock quantities and their prices can be set up to an accuracy of four decimal places, and prices can be generated by mark-ups. Analysis is available for monthly and yearly sales, gross margins, stock valuations (by standard, average and latest cost) and stock quantities (in stock and on order).

There is the facility to enter mark-up percentages for all six selling price lists and to set percentage discounts for a given purchase quantity. You can also assign stock categories and product and purchase groups for which the total sales for the month and year-to-date are held. Stock may be "committed", or allocated to the Sales Order Entry, Bill of Materials and PowerLink Job Costing modules. Stock on order figures that are generated by the Purchase Ordering module are displayed.

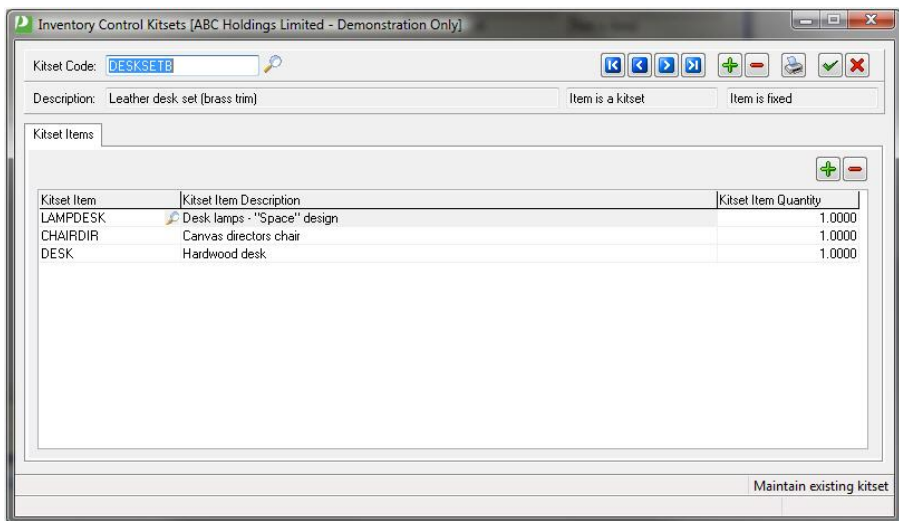

Inventory Control, Transaction Entry, Receipts Screen

Transaction Entry

Transactions are generated thorough the integrated Attaché PRO modules, or they can be entered onto a single transaction entry screen under a number tabs. The transaction entry interface is consistent with other entry screens in the system and includes receipts, adjustments, transfers and credits for returned items (includes wastage option). Access to entry of individual transaction types can be controls for groups of users allowing the administrator to control who has rights to create a credit for example.

Kitsets

The Kitsets feature allows you to group products together for sale using a Kitset code allowing rapid order entry.

Inventory Control, Kitsets screen

Special Pricing Integration

The Inventory Control module integrates to the optional Special Pricing module for even greater pricing flexibility and control, allowing prices to be maintained for individual customers for example.

Features

- Comprehensive detailing of stock items
- Multi-warehouse / multi-branch stock holding in up to 1,000 locations
- Wastage and usage transactions
- Quantity discounts
- Six selling price lists + integration to Special Pricing for extra flexibility
- User defined selling price list names
- Customer product discount schedule
- Fixed, variable and charge stock items
- Standard, average and latest cost pricing
- Kitset management
- Preferred supplier details for each stock item
- Multi branch transactions
- Analysis by category
- Analysis by product group and purchase group
- Comprehensive sales reports
- User definable multiple stock units (each, dozen, crate)
- Percentage markup facilities
- Defaults for each user for branch and stock balance pop up behaviour
